C2M Solution on Meesho Supplier Hub

Oct 21, 2026 · @Team Socials

How to read this

Every element of our finalised Round-2 solution is mapped here to today's Supplier Hub. Of 60 elements, **11 already exist** in the panel and are reused as-is, **23 extend an existing page**, and **26 are new**. **33 are P1**, the set the prototype must show.

- **Source:** the Team RK supplier account, walked page by page on 20–21 Oct 2026, and the final DICE Round-2 deck. The solution and its numbers are the deck's, unchanged.
- **Tags:** *Exists* = already in the panel, reused as-is. *Extend* = an existing page or field gains our feature. *New* = a page, tab or card that does not exist today.
- **Priority:** P1 = shown in the prototype's hero journey. P2 = build if time allows. P3 = mention only.
- **IDs:** DE Demand Intelligence Engine · PI Price Integrity Layer · FO Factory Onboarding · LB AI listing bot · PP Cluster Pack Point · LW Factory Launch Week · GL Growth Loop · OP ops console.

Personas (from the deck)

Persona	Profile	Route in the prototype
Jasmeet Sharma	Kitchenware manufacturer	1 L steel bottle: making cost ₹80, list ₹147, take-home ₹14, B ₹160, first lot 150 units. Launch Week 1
Samar Biswas	Footwear manufacturer, ships in bulk today	Offline maker using the Cluster Pack Point
A reseller	Buys from makers and resells	Fails the seller-type and GST/Udyam checks; not launch-eligible

The panel today

The Supplier Hub already holds most of the data our solution needs: funnel metrics, estimated orders, price competitiveness, quality bands and a warehouse program. What it lacks is guidance before listing, a non-discount launch route, and warehouse access for new makers.

Page	Where	What it does today	Our solution builds on it
Sign-up	supplier.meesho.com	Mobile + OTP; right panel shows generic stats (11 lakh+ suppliers, 700+ categories) and needs: GSTIN or Enrolment ID, bank account	Yes
Business Details	Onboarding step 1	GSTIN/UIN entered; legal name, PAN and registered address auto-fetched	Yes
Pickup Address	Onboarding step 2	Factory or shop address; assumes a Meesho partner picks up every order (self-ship only)	Yes
Bank Details	Onboarding step 3	Account + IFSC, name must match GSTIN/UIN	No
Supplier Details	Onboarding step 4	Store name, email, **business type** (7 options incl. "manufacturing unit" vs "buy from other sellers"), WhatsApp opt-in pre-ticked. Business type is self-declared and unused	Yes
Home	Sidebar	3-step strip: Upload catalogs → Catalogs go live → Get your first order. Upload = Single or Bulk. Right rail: account setup, Learn & Grow videos	Yes
Notices	Top tab	Sale creatives (Mega Blockbuster, Maha Diwali) with generic tips: "keep enough stock", Sunday working, 11 AM manifest. Stock guidance goes by email. Leave-request form	Yes

Page	Where	What it does today	Our solution builds on it
Add Single Catalog	Catalog Uploads	4-level category tree → front image (1–9 products, 10 banned image types) → about **31 mandatory fields + 4 mandatory images** → price table: Meesho Price, Wrong/Defective Returns Price, MRP, Inventory. No fees or take-home shown	Yes
Bulk Catalog Upload	Catalog Uploads	Category tree → **Generate Prefilled Template** from front images (new, recommended) or empty Excel	Referenced
Catalog Uploads	Sidebar	Upload counts; status tabs Action Required, QC in Progress, QC Error, QC Pass. Bulk QC errors fixed via download error Excel → re-upload. Both Team RK bulk uploads hit QC Error	Yes
Manage Pricing	Pricing	Price Performance; **Losing Orders** ("reduce price, get more orders"), Losing Views, **Best Priced**; sort by High Estimated Orders	Yes
Reduce RTO & Returns	Pricing	Prepaid discount (COD vs prepaid RTO) and WDRP adoption	Yes
Inventory	Sidebar	Active / Activation Pending / Blocked / Paused; All / Out of Stock / **Low Stock**; bulk stock update; sort by estimated orders	Yes
Quality	Sidebar	Score = share of 1–2★ ratings: Green 0–15% → 1.6× views, Yellow 15–22% → 1×, Red 22–25% → 0.6×, Blocked >25%. New listings: "No score available"	Yes
Business Dashboard	Performance	Views, clicks, orders, conversion rate, sales, return % + product performance	Yes

Page	Where	What it does today	Our solution builds on it
Promotions / Sale Opt-in	Boost Sales	Sale Events, Deals, Flash Events (new). Discount-led ("Apna discount khud decide karein"). Season banner: MDS 23 Oct–2 Nov, 22 Nov, 6 Dec	Yes
Offer Opt-in	Boost Sales	Mega Offers: prime slots (11 AM–1 PM, 8–10 PM), max 1,000 units per product, "up to 20× ROI"	Referenced
Warehouse	Sidebar	**Meesho Warehouse**: send stock, Meesho ships. ₹10 local / ₹20 national per delivered order (151–500 g), ₹14 per return, GST + APOB ₹9,999 + GST per location. "Join Us Now" opens a Google Form with **3 locations: BLR, GGN, KOL**. Video: limited to top sellers	Yes
Orders	Sidebar	On Hold → Pending → Ready to Ship → Shipped → Cancelled. Transparent barcoded packaging mandatory	Yes
Returns	Sidebar	Overview, Return Tracking, Claim Tracking	Yes
Claims	Sidebar	Raise claim; "up to 100% approval on genuine claims" built on barcoded packaging	Yes
Payments	Sidebar	Upcoming, completed, unscheduled payouts; compensation & recoveries; ads cost	Yes
Instant Cash	Boost Sales	Business-loan waitlist	No
Influencer Marketing	Boost Sales	50K+ creators, seller-set commission	No

Demand Intelligence Engine

The engine reads data Meesho already logs, and the panel already exposes parts of it: an "estimated orders" forecast per listing and a private funnel per seller. What is missing is the product-type view: the open gap, shown before a maker lists.

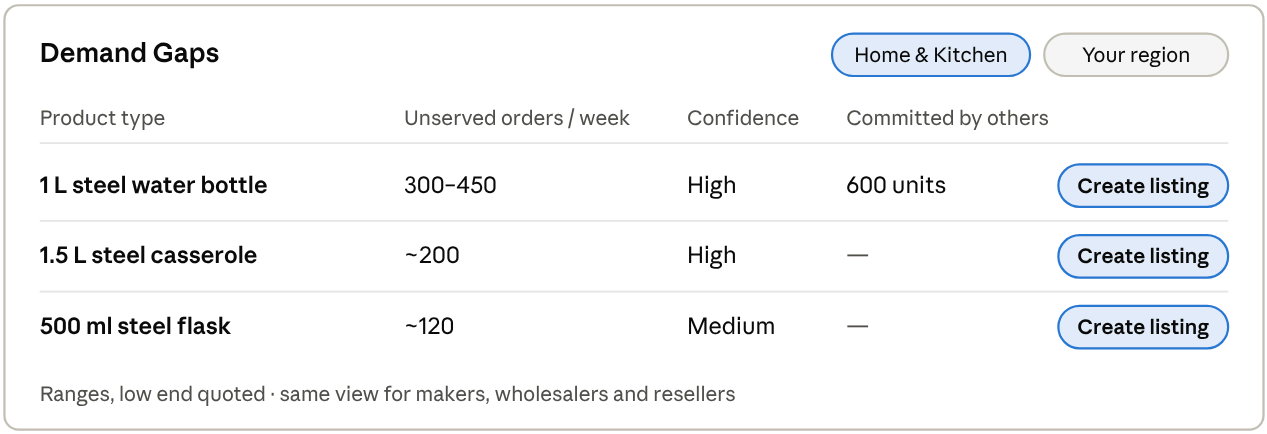

Where each engine output appears in the panel

Engine output (deck)	Shown at	Row
Demand teaser	Outreach message; sign-up right panel	FO-3, FO-4
Order book & lot sizing	Promotions → Factory Launch; bot Quantity screen	LW-3, LB-5
Restock signal	Inventory → Low Stock	GL-2
B's comparables	Manage Pricing	PI-2
Switch suggestions	Inventory → make-to-demand	GL-7

ID	Element	Today in the panel	In the prototype	Tag	Priority
DE-1	Forecast per listing	Manage Pricing and Inventory sort by "High Estimated Orders"	Reused as proof Meesho already forecasts; the engine forecasts per product type	Exists	—
DE-2	Access rule: a listing's own funnel visible only to its seller	Business Dashboard shows each seller only their own views, clicks, orders, conversion, return %	Reused as-is	Exists	—
DE-3	Open demand-gap data for every seller, same view for makers, wholesalers, resellers	Nothing at product-type level	New "Demand Gaps" page under Performance: gap as a range with confidence, price band, committed so far, "Create listing from this insight"	New	P2

Same demand gaps for every seller; makers win on speed

New Demand Gaps page under Performance (DE-3)

Mock-up · Demand Gaps page (DE-3)

Every seller sees the same gaps; "Create listing" opens Create from photos with the product type pre-filled.

Price Integrity Layer

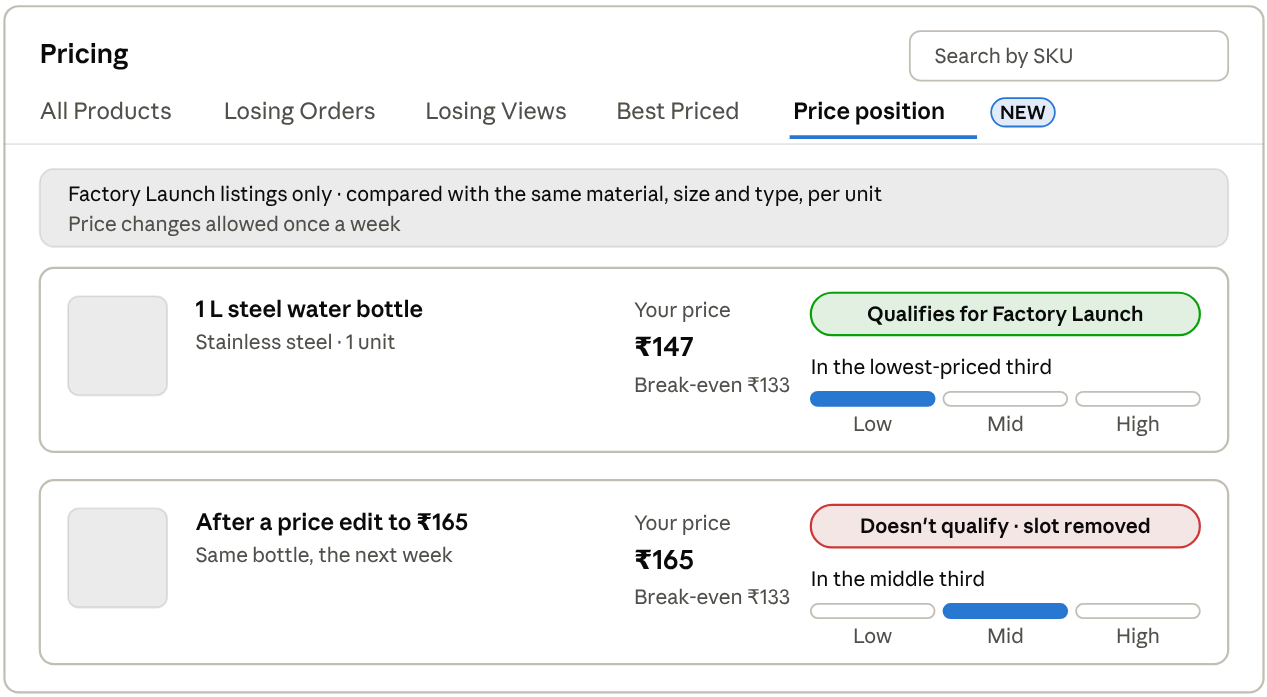

Manage Pricing already tells sellers they are "Losing Orders" and who is "Best Priced", and Quality already scores every listing. Benchmark B plugs into both: Quality supplies B's quality floor, and Manage Pricing shows each maker's price position and the price-hold, while B itself stays internal.

ID	Element (deck)	Today in the panel	In the prototype	Tag	Priority
PI-1	Quality floor for B's comparables	Quality score = share of 1–2★ ratings, with Green / Yellow / Red / Blocked bands	Reused as the "above the quality floor" filter	Exists	—
PI-2	Benchmark B: 25th-percentile price buyers paid, per unit, same spec, above the quality floor, more than N delivered orders, maker's own orders excluded; like-for-like comparison	Manage Pricing tabs: All Products, Losing Orders, Losing Views, Best Priced	New tab **Price position** in Manage Pricing: per SKU, whether the price qualifies and where it sits among like-for-like listings (lowest, middle or highest third of similar listings; see the mock-up below). B itself is shown only in the ops console	Extend	P1

ID	Element (deck)	Today in the panel	In the prototype	Tag	Priority
PI-3	Auto price-hold: gap to B kept as B moves; breach removes the launch slot, then visibility review	No alert on price rises	Breach banner on Manage Pricing and the Factory Launch listing: "price no longer qualifies" → launch slot removed, with no number shown. Cost rise lifts B; a tax cut must pass on	New	P1
PI-4	Spec policing: "not as described" returns above 1.5× the category norm, plus sampled test buys	Quality Recommendations: Blocking Soon, Action Pending, Fixed	Spec-policing flag added to Quality Recommendations	Extend	P2

Makers see whether their price qualifies and where it ranks, never B

Manage Pricing with the new Price position tab, for Jasmeet's 1 L steel bottle

Never shown to makers: B, the cut-off price, other sellers' prices. B appears only in the ops console.

Mock-up · Manage Pricing → Price position tab (PI-2, PI-3)

Position is shown in thirds, not as a percentage, so it does not reveal where the cut-off sits. The second row is the price-hold (PI-3) firing after a price edit. The tab appears only for makers who passed the seller-type and GST/Udyam checks (FO-6, FO-7); resellers don't see it.

The bot's Price screen (LB-6) checks the price against B and shows only whether it qualifies.

How B stays internal. Makers never see B as a number, and the check applies only to factory-track listings; resellers see Manage Pricing as it is today.

Where the check sits in the maker's flow:

1. Cost check (FO-5): does a qualifying price exist for this product, yes or no
2. Bot Price screen (LB-6): "Qualifies for Factory Launch" or not, at go-live
3. Launch commit (LW-5): re-checked against the latest B
4. Any later price edit, in Inventory or Manage Pricing: auto price-hold (PI-3)
5. Manage Pricing → Price position (PI-2): position among like-for-like listings, no B
6. Ops console: the only place B appears as a number

If a maker finds B by trial and error anyway:

- Pricing at B still beats 75% of what buyers paid, since B is the 25th percentile
- Sitting at the line loses: an oversubscribed slot goes to the lower price
- B is recomputed weekly from delivered prices, including other makers' cheaper sales, so the line keeps moving down
- Proposed for the prototype: price edits on launch listings allowed once a week, so each probe costs a week
- If price drop delivered stays under target, ops lowers the percentile (the deck's guardrail)

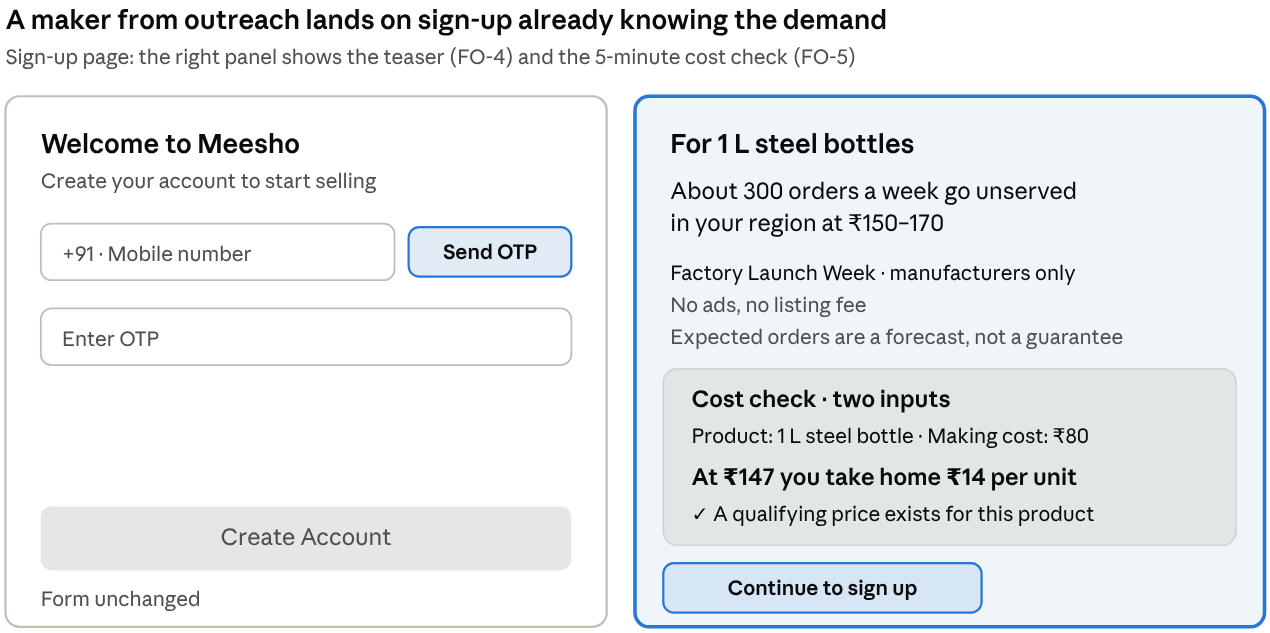

Factory Onboarding: outreach, sign-up and checks

Onboarding already fetches name, PAN and address from GSTIN/UIN, and already asks a business-type question that separates manufacturers from resellers. Our seller-type check reuses that question, which today is self-declared, asked last and never used.

ID	Element (deck)	Today in the panel	In the prototype	Tag	Priority
FO-1	Records check base	Sign-up by mobile + OTP; GSTIN/UIN auto-fetches legal name, PAN, registered address	Reused as-is	Exists	—
FO-2	WhatsApp only after opt-in	"I want to receive important updates on WhatsApp" checkbox in Supplier Details	Reused as the opt-in record	Exists	—
FO-3	Targeted outreach: Meesho exit records, IndiaMART, storefronts, cluster lists; first contact by IndiaMART inquiry or email, WhatsApp after opt-in; separate pitch for churned vs online-elsewhere/offline makers	None (outside the panel)	Mock outreach message with the demand teaser and the 5-minute link	New	P1
FO-4	Demand teaser	Sign-up right panel shows generic stats (11 lakh+ suppliers, 700+ categories)	Arriving from the outreach link, the right panel shows the maker's teaser: "1 L steel bottles: about 300 a week go unserved at ₹150–170"	Extend	P1
FO-5	Cost check: two inputs, take-home at every price, checked against B	None	5-minute cost check from the teaser link: product type + making cost → take-home at every price, does a band exist	New	P1

ID	Element (deck)	Today in the panel	In the prototype	Tag	Priority
FO-6	Seller type	Business-type dropdown with 7 options, asked in step 4 (Supplier Details), unused	Same question moved to step 1, right after the GST fetch	Extend	P1
FO-7	Auto checks: GST nature of business and Udyam; mismatch → not launch-eligible	Only name, PAN, address fetched	GST nature of business + Udyam activity fetched and matched to seller type; result shown as launch-eligible or not. The reseller fails here GST's "Nature of Business Activity" (e.g. Factory / Manufacturing) is returned by the GST Taxpayer Search API (source) but is self-declared and often lists several activities, so it counts together with Udyam's activity and the price band. No Udyam → "Pending" with a link to the free Udyam registration. Non-GST (Enrolment ID) sellers keep selling as today but are not factory-track; makers in the ₹5–25 Cr band are above the GST threshold anyway.	Extend	P1
FO-8	Pack Point or self-ship	Pickup Address assumes a Meesho partner picks up every order	After the address saves: Cluster Pack Point (one bulk lot a week) or self-ship	Extend	P1

ID	Element (deck)	Today in the panel	In the prototype	Tag	Priority
FO-9	Win-back pitch for churned makers ("your bottles got 2,400 views but only 38 clicks; the main photo was the likely reason")	Dormant accounts see the same Home as everyone	Win-back card on Home for a dormant account Shown when a maker from Meesho's exit records (past listings, no recent orders) logs back in. It carries the deck's churned-maker pitch: • Why it stalled: "Your 1 L steel bottle got 2,400 views but only 38 clicks. The main photo was the likely reason, not the bottle" • Demand now: about 300 orders a week unserved at ₹150–170 in their region • The offer: next Factory Launch Week, manufacturers only, fixed slot with 30–50 factories, no ads, no listing fee; orders are a forecast, not a guarantee • Actions: "Relist with Create from photos" (old listing pre-loaded, photo fix first) · "See your take-home" (cost check)	Extend	P2

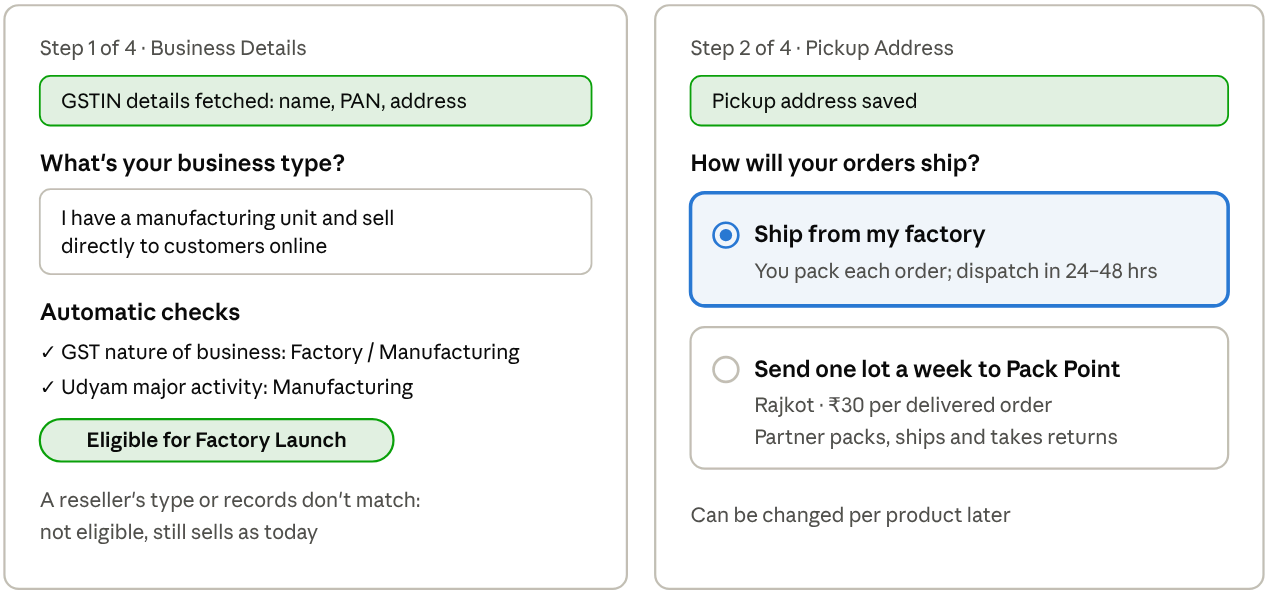

Mock-up · Sign-up with teaser and cost check (FO-4, FO-5)

The sign-up form stays as it is; only the right panel changes for makers arriving from outreach.

Seller type is checked against GST and Udyam; shipping is chosen up front

Onboarding: Business Details (FO-6, FO-7) and Pickup Address (FO-8)

Mock-up · Business Details checks and Pickup Address choice (FO-6 to FO-8)

The business-type question Meesho already asks becomes the seller-type check, verified against GST and Udyam.

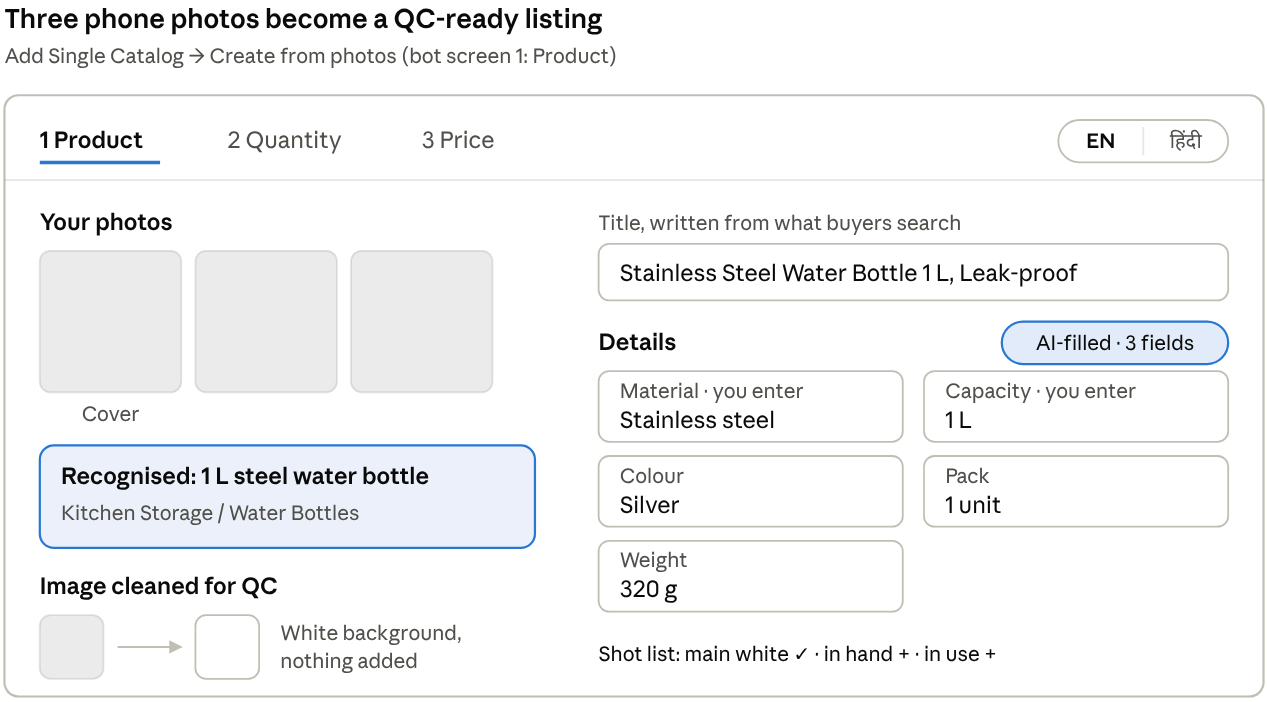

Factory Onboarding: AI listing bot

Meesho already generates prefilled templates from front images, but only for bulk Excel uploads. Our bot's three screens fit onto Add Single Catalog: Product onto the details form, Quantity onto the Inventory column, Price onto the Meesho Price column, which today shows no fees or take-home.

ID	Element (deck)	Today in the panel	In the prototype	Tag	Priority
LB-1	Image-to-attribute prefill	Bulk Catalog Upload → "Generate Prefilled Template" from front images (marked NEW, Recommended)	Reused as proof the capability exists; the bot brings it to single uploads	Exists	—

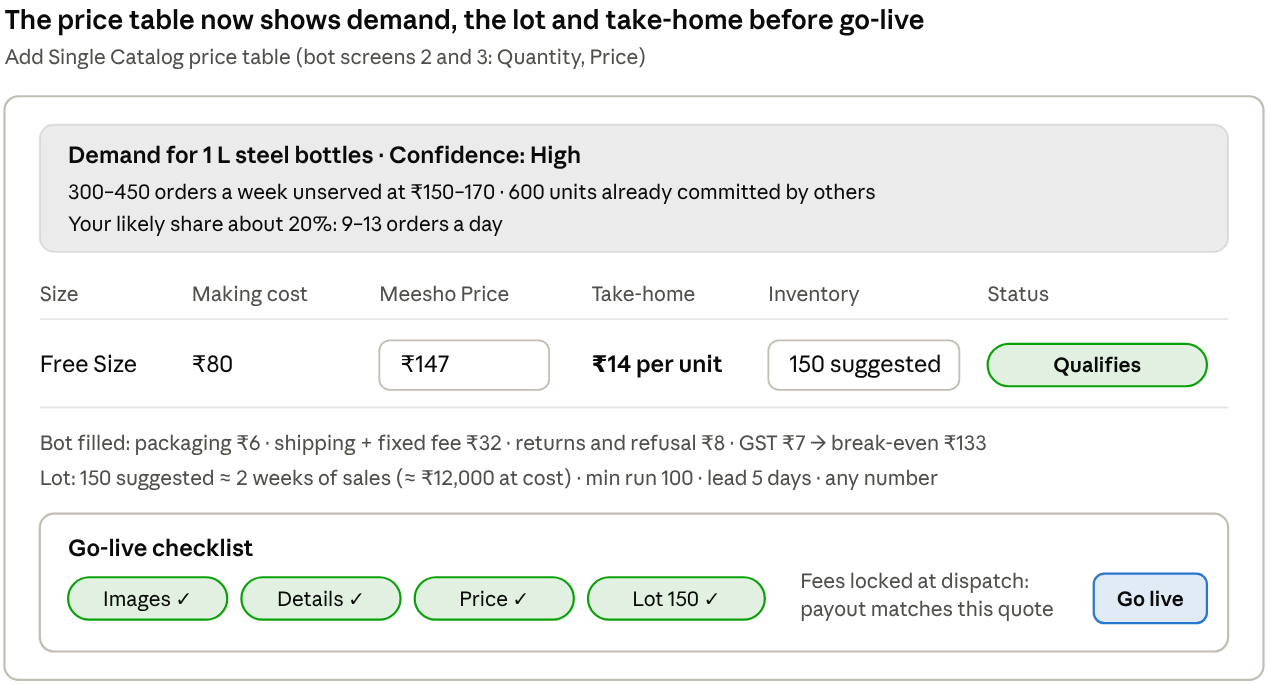

ID	Element (deck)	Today in the panel	In the prototype	Tag	Priority
LB-2	Listing rules the bot must pass	10 banned image types, 4 required image slots (Front, Relative size, Size comprehension, Uses), about 31 mandatory fields, QC statuses	Reused as the bot's targets	Exists	—
LB-3	Entry to the bot	Home step 1 and Catalog Uploads offer Single or Bulk	Third option **Create from photos**	Extend	P1
LB-4	Screen 1, Product: 3–5 phone photos → product recognised, white background, title from what buyers search, attributes pre-filled and editable, shot list of what top listings use	Add Single Catalog: 4-level category tree, then every field by hand	Same page with category, images, title and attributes pre-filled and marked as filled by the bot	Extend	P1
LB-5	Screen 2, Quantity: unserved orders a week for the product type, confidence, committed by others; minimum run and lead time pre-filled; first lot ≈ 2 weeks of expected sales, can only go lower	Inventory is a blank number in the price table	Demand card above the table; Inventory pre-filled: 150 units (≈ ₹12,000 at cost), likely share about 20% (9–13 orders a day) The share comes from the product type, not the maker (deck appendix): median of first-28-day orders ÷ open gap across new listings of that type in the last 6–12 months, adjusted for price and for how many sellers chase the gap. 20% × 300–450 a week ≈ 9–13 a day. A type with no history: gap split evenly among expected entrants, Low confidence, minimum batch only.	Extend	P1

ID	Element (deck)	Today in the panel	In the prototype	Tag	Priority
LB-6	Screen 3, Price: maker enters making cost and margin; bot fills packaging, shipping + fixed fee, returns buffer, GST; shows list price and take-home; checks against B	Meesho Price, WDRP, MRP typed by hand; no fees shown	Making cost ₹80, margin 17.5% → packaging ₹6, shipping + fixed fee ₹32, returns & refusal ₹8, GST ₹7 → break-even ₹133 → list ₹147, take-home ₹14 per unit, price check shows "Qualifies for Factory Launch"; B not shown	Extend	P1
LB-7	Fulfilment: Pack Point fee card by default, self-ship toggle	No fulfilment choice	Toggle on the Price screen	New	P2
LB-8	Go-live checklist; fees locked at dispatch, payout matches the quote	Submit Catalog sends straight to QC	Checklist (Images ✓ Details ✓ Price in band ✓ Lot 150 ✓) before Go live, with "fees locked at dispatch"	Extend	P1
LB-10	Hindi and English	Panel in English only	EN / हिंदी toggle on the bot screens	New	P1

Mock-up · Add Single Catalog, Create from photos (LB-3, LB-4, LB-10)

The existing details form, filled from the photos; every field stays editable.

Mock-up · Price table with demand, lot, take-home and checklist (LB-5, LB-6, LB-9)

The existing price table gains the demand card, a pre-filled Inventory, take-home and a status chip; B itself is never shown.

Listing fields: who fills what

Today's Water Bottles form has 31 mandatory fields plus 4 mandatory images. With the bot, **21 of the 31 are pre-filled by default** and the maker types **14 values**: 10 of today's fields that need a measurement, a claim or the maker's knowledge, plus four new inputs: making cost, margin, minimum run and lead time. Every pre-filled field stays editable.

Screen	Field (as in today's form)	Mandatory today	Filled by	How
Product	Category (4 levels)	Yes	Bot	Recognised from the photos; maker confirms the breadcrumb
Product	Front image	Yes	Maker + bot	Maker uploads phone photos; bot cleans to white background

Screen	Field (as in today's form)	Mandatory today	Filled by	How
Product	Relative size, Size comprehension, Uses images	Yes	Maker	Shot list tells the maker which photos to add
Product	Product Name	Yes	Bot	Written from the image and what buyers search
Product	Generic Name	Yes	Bot	From category
Product	Type	Yes	Bot	From image and category
Product	Color	Yes	Bot	From image
Product	Material	Yes	Maker	Maker specifies; a photo can't tell the material
Product	Capacity in L	Yes	Maker	Maker enters it; a photo can't tell capacity reliably
Product	Add Ons	Yes	Maker	Maker specifies what comes in the box (lid, strap, cover)
Product	Size	Yes	Bot	Category default (Free Size) Today's form asks Size even for bottles; for Water Bottles the only value is "Free Size" (see today's price table), so the bot sets it from the category
Product	Net Quantity (N)	Yes	Bot, maker confirms	Pack count seen in the image, pre-filled as default; maker must confirm before go-live
Product	Product Unit, Volume Unit, Product Weight Unit	Yes	Bot	Category defaults, folded in as unit pickers beside their measurement fields (volume unit by Capacity, weight unit by the weights, product unit by L/B/H), not separate fields, can be changed by maker if needed
Product	Country of Origin	Yes	Bot	India, from the GST address

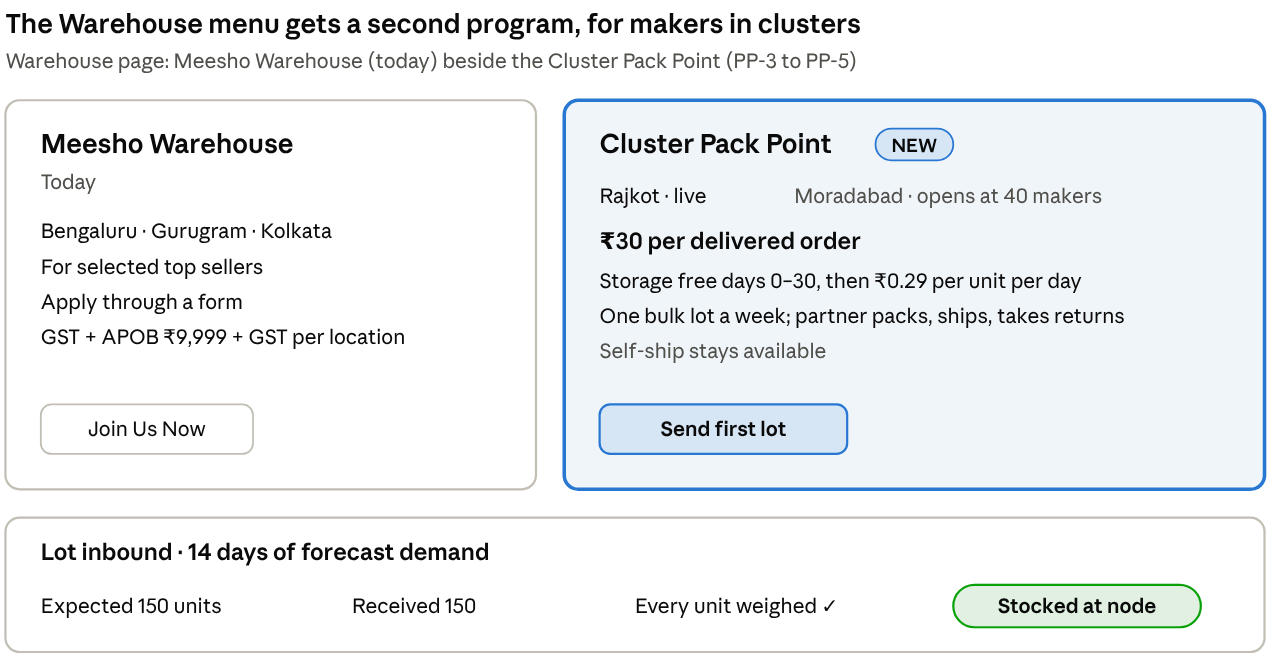

Screen	Field (as in today's form)	Mandatory today	Filled by	How
Product	Manufacturer Name, Address, Pincode	Yes	Bot	From the GST record
Product	Packer Name, Address, Pincode	Yes	Bot	Set from the Pickup Address choice (FO-8), made at onboarding before this screen; switching mode later on the Price screen (LB-7) updates it. Self-ship: same as manufacturer (existing checkbox, ticked). Cluster Pack Point: still the manufacturer if units arrive in their retail pack; the Pack Point partner's name, address and pincode if the node does the retail packing
Product	Importer Name, Address, Pincode	Yes	Bot	Marked not applicable when origin is India
Product	Description	No	Bot	Generated from the filled attributes
Product	Leak Proof	Yes	Maker	A claim the photo can't prove
Product	Product Length, Breadth, Height	Yes	Maker	Needs a measurement
Product	Product Weight, Net Weight (gms)	Yes	Maker	Needs weighing; category typical shown as a hint
Product	Brand, BIS/ISI number, CM/L number, Style code	No	Maker	From the maker's own records
Quantity	Inventory	Yes	Bot	Suggested first lot from demand; maker can edit

Screen	Field (as in today's form)	Mandatory today	Filled by	How
Quantity	Minimum run, Lead time	New	Maker	Factory-specific, so the maker enters them Each gets an (i) tooltip, like the ones on today's form. Minimum run: "The smallest batch your factory can make profitably in one run." Lead time: "Days from starting production until stock is ready to ship, or reaches the Pack Point."
Price	Making cost per unit	New	Maker	One of the two price inputs
Price	Expected margin	New	Maker	The other price input
Price	Packaging, shipping + fixed fee, returns buffer, GST	New	Bot	From real data for the product type
Price	Meesho Price	Yes	Bot	Computed from cost, margin and fees; status shows whether it qualifies
Price	Wrong/Defective Returns Price	No	Bot	Meesho's existing suggestion
Price	MRP	Yes	Maker	Printed on the pack; a legal declaration

Cluster Pack Point

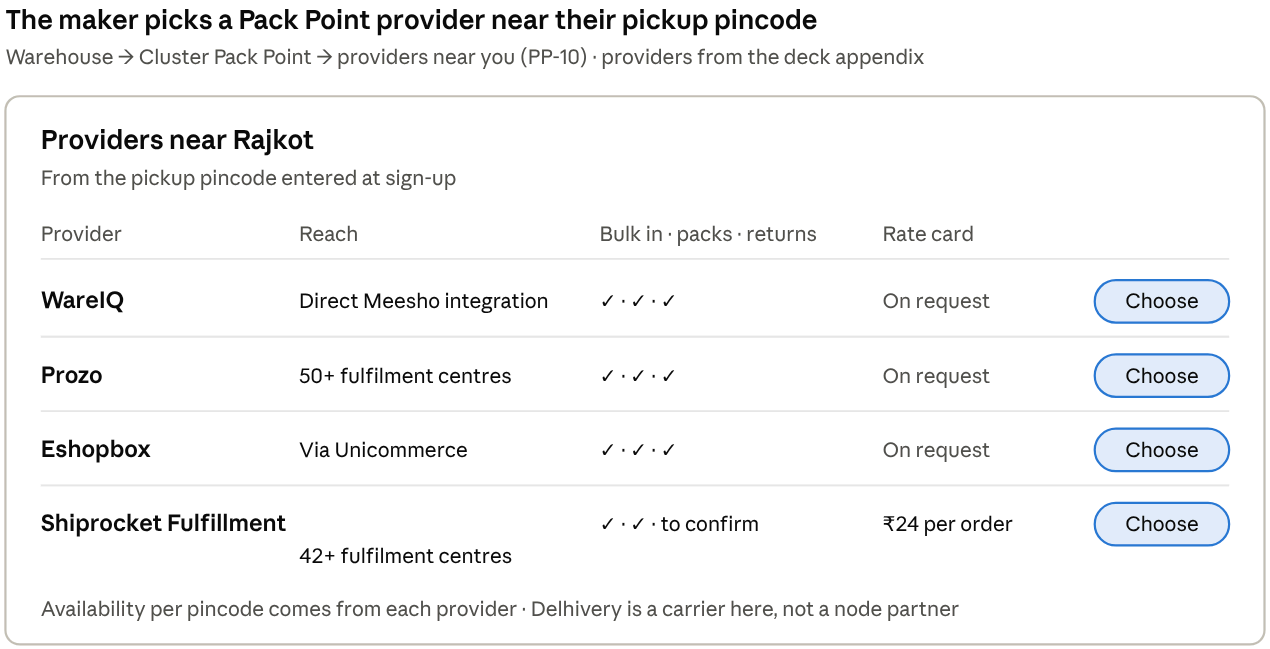

The Warehouse menu already exists and holds Meesho Warehouse, which serves top sellers from Bengaluru, Gurugram and Kolkata through a Google Form. The Cluster Pack Point sits in the same menu as a second program, for makers in clusters who send one bulk lot a week.

ID	Element (deck)	Today in the panel	In the prototype	Tag	Priority
PP-1	A place for stored-inventory fulfilment	Warehouse → Meesho Warehouse: rate card, "Join Us Now" form (BLR, GGN, KOL), limited to top sellers	Reused as the home for the Pack Point	Exists	—
PP-2	Barcoded, provable parcels	Transparent barcoded packaging mandatory; claims built on it	Reused; the Pack Point packs to this standard	Exists	—
PP-3	Cluster Pack Point program	Warehouse page shows one program	Second program card **Cluster Pack Point**: one lot a week, partner packs, ships and takes returns; self-ship stays available	Extend	P1
PP-4	Fee and density gate: ₹30 per delivered order at 40 makers (₹44 at 20, ₹26 at 60, ₹23 at 80); storage free days 0–30, ₹0.29 per unit per day after; opens only at 40 makers	Meesho Warehouse rate card	Pack Point fee card and cluster status (Rajkot live; Moradabad opening at 40 makers)	New	P1
PP-5	Inbound: lot = 14 days of forecast demand, received, counted, every unit weighed	"Dispatch inventory to the warehouse", no sizing	Lot inbound screen with weights per unit	New	P1
PP-6	Storage: racked, daily stock snapshot; maker pays from day 31	None	Stock-at-node view with days held and charges from day 31	New	P2
PP-7	Pick, pack, QC, manifest by the partner; 24-hour SLA; one pickup for all makers	Orders: seller prints labels, manifests, ships	Pack Point orders shown read-only in Orders	Extend	P2
PP-8	Returns land at the Pack Point: opened, weighed against dispatch, graded A/B/C, restocked	Return Tracking shows status only	Weight at dispatch vs return and the grade on Return Tracking	Extend	P2
PP-9	Who pays: wrong item → Pack Point; empty or swapped → buyer, claim denied; never arrived or damaged → carrier; not as described → maker	Claims need evidence	Verdict from the weights shown on each claim	Extend	P2

Mock-up · Warehouse page with the Cluster Pack Point (PP-3 to PP-5)

Meesho Warehouse stays as it is; the Pack Point is a second card on the same page.

Mock-up · Pack Point providers near the maker (PP-10)

PP-10 (New, P2): the Pack Point card lists fulfilment providers serving the maker's pickup pincode, each with its services and rate card. Providers and the ₹24 Shiprocket rate are from the deck appendix; other rate cards are not public, so they show as on request.

Factory Launch Week

Promotions already runs dated events (Sale Events, Deals, Flash Events) and Mega Offers already caps slots and units per product. Factory Launch Week becomes one more event type there, with a published order book and entry by rule instead of by discount.

ID	Element (deck)	Today in the panel	In the prototype	Tag	Priority
LW-1	Dated, promoted events with capped slots	Promotions: Sale Events, Deals, Flash Events; Mega Offers: prime slots, max 1,000 units per product; Notices carry sale creatives	Reused as the pattern and the layout	Exists	—
LW-2	Factory Launch Week, 5 days	No such event type	New tab **Factory Launch** in Promotions	New	P1
LW-3	Published order book: slots per product type, price cap B, expected orders per listing (range), suggested first lot, committed so far ("crowded" flag), Pack Point fee, key dates (commitments close day 7, stock at node by day 18, live days 21–25); lower price wins an oversubscribed slot	Sale pages show dates and a join button	Order book page for the Home & Kitchen launch; the price cap is checked at commit, not printed	New	P1
LW-4	Eligibility by rule: manufacturer, records agree, price in band, stock ready	Any seller can opt into sales	Eligible makers see nothing extra, just Commit; the checklist appears only when a check fails, e.g. the reseller sees "not eligible" and why if price eligibility doesn't match	New	P1
LW-5	Commit SKUs and demand-sized lots	Opt-in asks for a discount	Commit flow: SKU → units the maker chooses to commit (150 suggested; any number) → price check passes; no discount field needed	New	P1

ID	Element (deck)	Today in the panel	In the prototype	Tag	Priority
LW-6	Promote the launch to makers	Notices for sales; Home step 3 "Get your first order" has no help	Launch notice, plus a Home step 3 card "Next Factory Launch · slots left · join"	Extend	P1
LW-7	Concentrated demand on day one, seen directly	None during an event	Live launch view, days 21–25: orders per day vs expected, units sold of the lot	New	P1
LW-8	Launch ratings down-weighted, returns judge quality; launch orders and reviews build a listing-level quality score replacing the inherited seller-level one	Quality: "No score available" for new listings	Listing-level score on Quality, built from launch orders and returns	Extend	P1
LW-9	After the week: onboarding boost continues 3–6 months; cheaper-equivalent swap once the listing score matches a pricier one	None visible	Status line on the listing: boost active until, swap eligible	Extend	P2
LW-10	Launch section on home and deals, slots capped	Buyer app sale sections	Buyer-app launch section	Extend	P1

Mock-up · Promotions → Factory Launch order book (LW-2 to LW-5)

Same layout as Sale Events and Deals; the price cap is checked at commit, not printed.

Mock-up · Live launch view and listing score (LW-7, LW-8)

Day counts follow the launch calendar: day 3 of 5 is day 23.

Make-to-Demand Growth Loop

Inventory already flags Low Stock and the Business Dashboard already shows each seller's views, clicks, conversion and return %. The Growth Loop turns those into a dated restock, a weekly fix and a make-to-demand verdict.

ID	Element (deck)	Today in the panel	In the prototype	Tag	Priority
GL-1	Data the loop reads	Inventory (Out of Stock, Low Stock), Business Dashboard funnel, Quality Recommendations, Reduce RTO & Returns	Reused as inputs	Exists	—
GL-2	Restock loop: run-rate from the last 7 days, trend-adjusted; reorder point = run-rate × (lead time + safety days); next batch ≈ 21 days, never below minimum run, dated	Low Stock lists SKUs, no guidance	Restock card: 11 a day, 84 on hand, 7.6 days of cover, reorder at 77, next batch 230 (≈ ₹18,400) — "start 230 by 24 Nov", lands 29 Nov	Extend	P1
GL-3	SKU Health Coach: one cause, one fix, one Hindi nudge, one tap, weekly	Dashboard shows numbers only; Home has "Learn & Grow" videos	Coach card at the top of Business Dashboard and on Home: "1.6% click-through vs 4.2% for similar listings — change the main photo"	New	P1
GL-4	Coach triggers: weak listing, price problem, trust or spec problem, product fix, listing fix, stop or switch (percentile conditions)	Funnel totals per seller	Per-SKU funnel; the trigger that fired stays internal, the seller sees only the fix	Extend	P1
GL-5	Make to demand: Make more · Keep · Fix · Stop · Switch	Inventory states: Active, Paused, Blocked	Verdict chip per SKU in Inventory	New	P1
GL-6	Switch to what's missing: open-gap products for the same line	None	"What to make instead" panel → plan a lot (e.g. 1.5 L steel casserole)	New	P1
GL-7	RTO rate per SKU in the cost stack and the coach	Reduce RTO & Returns: prepaid discount and WDRP adoption	SKU-level RTO shown and passed to the bot's returns buffer	Extend	P2

Mock-up · Inventory restock card, verdicts and switch (GL-2, GL-6, GL-7)

All restock numbers are the deck's worked example.

Mock-up · Business Dashboard SKU Health Coach (GL-4, GL-5)

The funnel tiles already exist on the Business Dashboard; the trigger label and the coach card are added.

Ops console

The Supplier Hub is seller-facing only, so the deck's gates, metrics and decision rules need a Meesho-side console. All of it is new.

ID	Element (deck)	In the prototype	Tag	Priority
OP-1	Demand Intelligence Engine: analyse → diagnose (supply gap, under-supplied, product gap, price gap) → size the gap → suggest action	Demand-gap console: open gap per product type, confidence, committed-supply ledger	New	P1
OP-2	Order book and slots	Order-book admin: slots, price cap, allocation	New	P2
OP-3	Onboarding metrics: conversion ≥ 50% at each step, contact → live ≤ 14 days	Onboarding funnel view	New	P2
OP-4	Day-30 decision rule: Invest (stick rate ≥ 0.5, demand lift ≥ 1.5×, sell-through > 60%, price durability held) · Tighten · Stop; measured against control districts	Day-30 decision card per launch	New	P1
OP-5	Day-90 scorecard: price drop delivered ≥ 8% of B, makers active at day 90 ≥ 60%, second lot by day 45 ≥ 50%, makers per manager rising	Scorecard with Price Drop Delivered = Σ (B − price) × orders ÷ orders	New	P1

ID	Element (deck)	In the prototype	Tag	Priority
OP-6	Meesho KAM only when a fix has failed twice	Escalation queue	New	P2
OP-7	Pack Point density and fee per delivered order vs the ₹30 model	Node monitor	New	P3

Mock-up · Ops console day-30 decision card (OP-4)

Thresholds are the deck's; the four results shown are sample values.

Build plan: prototype screens

The 33 P1 elements fit into 15 screens along Jasmeet's day 0 to day 90 journey. 11 of the 15 are existing Supplier Hub pages; build screens 3–8 first, they carry the core maker flow.

#	Day	Prototype screen	Panel page it starts from	P1 elements	Reuses
1	0	Demand-gap console	— (ops)	OP-1	—
2	1	Outreach message → sign-up with teaser → 5-minute cost check	Sign-up	FO-3, FO-4, FO-5	FO-1
3	1	Seller type + GST/Udyam checks (reseller fails)	Business Details, Supplier Details	FO-6, FO-7	FO-1, FO-2
4	1	Pack Point or self-ship	Pickup Address	FO-8	—
5	2	Create from photos + next-launch card	Home	LB-3, LW-6	—
6	2	Bot screen 1: Product	Add Single Catalog	LB-4, LB-10	LB-1, LB-2
7	3	Bot screens 2–3: Quantity and Price, then go-live checklist	Add Single Catalog price table	LB-5, LB-6, LB-9	—
8	5	Factory Launch → order book → eligibility → commit	Promotions	LW-2, LW-3, LW-4, LW-5	LW-1
9	21–25	Launch section + "Direct from the maker"	Buyer app	LW-10	—

#	Day	Prototype screen	Panel page it starts from	P1 elements	Reuses
10	21–30	Live launch view + listing-level quality score	Promotions, Quality	LW-7, LW-8	PI-1
11	30	Day-30 decision card	— (ops)	OP-4	—
12	31+	Restock card, verdicts, what to make instead; SKU Health Coach	Inventory, Business Dashboard	GL-2, GL-4, GL-5, GL-6, GL-7	GL-1, DE-2
13	40	Price position tab + price-hold breach	Manage Pricing	PI-2, PI-3	DE-1
14	45–60	Cluster Pack Point: Samar's lot in, fee card, weights	Warehouse	PP-3, PP-4, PP-5	PP-1, PP-2
15	90	Day-90 scorecard	— (ops)	OP-5	—

P2 and P3 elements (DE-3, PI-4, FO-9, LB-7, LB-8, PP-6 to PP-9, LW-9, GL-3, GL-8, OP-2, OP-3, OP-6, OP-7) slot into the same screens if time allows.

Open questions about the panel

- [ ] Pages not yet seen with live data: Orders, Returns, Payments and Business Dashboard were all empty on the Team RK account. Screens 12 and 14 will use mock data in the same layout
- [ ] Can a new account opt into Sale Events before it has a live catalog? Decides how the Factory Launch tab looks for a first-time maker
- [ ] GST's nature of business is available via the Taxpayer Search API (confirmed); still to check whether Meesho's own GSTIN fetch reads it, which decides how FO-7 is shown
- [ ] Meesho Warehouse reply to the Join Us form is pending; it may show whether packing is part of their fee, useful when presenting PP-3 beside it
- [ ] The single water-bottle catalog is in QC; its result will show the real QC feedback screen the bot should prevent
